

Acknowledgements

At this point, I realize that pursuing a Ph.D. is really a very difficult and somehow a lonely path. In pursuing this path, first and foremost, I would like to thank my supervisor **Dr. Jitendra K. Pandey** whose constant encouragement was indispensable in making this dissertation a reality. He has had exceptional professional impact on my development as a researcher. He is an astounding scientist and mentor. He impelled me to exploit my strengths and overcome my weaknesses. His endurance to tackle difficult and new problems and his courage to withstand the many failures that accompany such risks is commendable.

Also, I feel a deep sense of gratitude towards my external supervisor, **Dr. Girdhar Joshi**, who has been a remarkable source of inspiration and encouragement throughout this journey of PhD. I had the opportunity to work and learn great things from him. I want to extend him my thanks for perusal of my whole papers and reports and giving me a lot of valuable suggestions and criticisms. I am also highly grateful to the Chancellor, **Dr. S. J. Chopra**, University of Petroleum & Energy Studies (UPES). Due to him, working at Nanotechnology Laboratory (UPES) has been really an enriching experience, with an exciting and immensely supporting environment. The exposure and experience gained at Nanotechnology Laboratory has given me immense confidence to work at any place in the world.

I sincerely and heart fully thank **Mr. Rishabh Sharma** from Indian Institute of Technology, Delhi for helping me throughout the work with almost all the characterization facilities and providing timely results. He extended his support especially with Transmission electron microscopy, Steady state and time-resolved photoluminescence spectroscopy, Ultra Violet-visible spectroscopy, X-ray photoelectron spectroscopy, X-ray diffraction and many more. My generous thanks to **Dr. Sanjay Kumar**, Chemistry department, UPES for rendering his assistance to carry out

photocatalysis experiments in his lab. I would also like to thank **Mr. Ritesh Tiwari**, UPES for XRD imaging.

I wish to tender my humble thanks to the active cooperation and invaluable support offered by **Dr. Sanket Goel**, **Dr. Venkateswaran P S**. Special thanks to **Dr. Mansa R. Nouni**, Scientist F, Ministry of New and Renewable Energy for providing requisite knowledge about current scenario in energy industry and helping with paper reading and publication. **Ms. Shikha Jain** helped me with work discussed in Chapter 1. Thanks to **Mr. Surajit Monadal**, UPES for helping me coordinate the thesis work with the management staff.

I would like to express my heartiest thanks to **Dr. (Mrs.) Manika Khanuja**, Jamia Millia Islamia, Physics Department, whose inspiring guidance and fruitful discussions at every stage of my research work. I gratefully acknowledge invaluable cooperation provided by her.

An endeavour of as long as a Ph.D. journey requires sacrifices not only from the student but also from his close family. I will never be able to repay the efforts put by my family to prepare me for this study. No journey is complete without the everlasting prayers and support of the parents who deserve special mention here. My dear mother, **Smt. Bimlesh** and my loving father, **Shri R K Singh**, in the first place are the persons who rooted the fundamentals of strength in my character, showing me the joy of intellectual pursuit ever since I was a child. I can never thank them enough for their support and love through the years that landed me to UPES and continued me to inspire to this day and making me ready to face every obstacle in life with faith. My sisters and brother also shaped my life while growing up and as we go through life they continue to be in my thoughts. I express gratitude for their constant encouragement, love, and moral support, without which I could not have reached at this stage.

The ideas and words that follow represent only a small share of everything that happened while completing this thesis. The occasional successes were mixed with many failures. It is the success that you read in these pages, but it is the undocumented failures and minor accomplishments that also make up this thesis. It is only possible because of the hard work and

encouragement of the group of people described above. During my time at UPES, I made personal and scientific discoveries, published papers, developed lifelong friendships. As I sit down to write these acknowledgements, I am reminded that the completion of this thesis represents the closing of one unforgettable phase of my life, but a new and more welcoming phase awaits.

Before I finish, I offer my blessings and regards to all those people who assisted me and supported me with their courteous help in any respect during the fulfilment of this research study; with my sincere apology, if I was not being able to mention them all individually.

Sonal Singh
